

Assignment 8: Computer Vision Project Preparation

Machine Learning

Fall 2021

Note: Parts of this assignment are due early, so you can build off each others' ideas. The project pitches are due Thursday morning, so we have time to print and organize them.

Learning Objectives

- Reflect on course experiences and draft personal learning goals
- Ideate computer vision applications for your project

1 Develop Project ideas

Exercise 1 (60 minutes) Due Wednesday night (whenever night ends for you... go to bed)

Prepare for project brainstorming.

- Read the [project description](#).
- Consider your own learning goals for the project and write yourself a note to bring to class.
- Explore the suggested data sets (in the project description). You are also welcome to seek your own data set, though this may require additional time.
- Come up with at least 5 potential applications for computer vision, and share them here: [project 1 spreadsheet](#)

We hope that reviewing what other people post will help you to come up with even more creative ideas, and to get a sense of what others might be excited about. We have found that selecting a few project ideas and thinking about them in more detail can be useful in finding good pairings for partners. We ask you to be sure to complete the next exercise by Friday at 8 am, so that we can print and cluster your project ideas to make better use of class time.

Exercise 2 (60 minutes) Due by Friday at 8 am so we can print and organize

- Review some of the ideas that others' shared in the [project 1 spreadsheet](#).
- Select at least two potential applications that you find compelling, and flesh them out. These do not need to be based on your own ideas from the spreadsheet, and it's great to build off of the ideas of others (this could lead to a great partner match). You may want to consider some of the prompts in the Appendix A of the project description.

- (c) Create a pitch slide for both ideas in our shared slide deck (one slide for each of your two pitches). Please make a copy of the template slide, and be sure to keep the template as the first slide so others can find it. We will share these in the next class. [Slide deck and template](#).
- (d) Fill in the About You tab of [the project 1 spreadsheet](#).
